Applied the new directory structure to this RProject.

TO-DO:

- re-compile each of the Rmd and Rnw files and correct the relative paths
- same for the scripts that create the ficyttitious calibration data
- it's OK to create two data tables, on in wde and one in long format
- use the diagrmmeR pckage to draw directory trees?

Or just do this:

```
project\
   |-- data\
   |-- manage\
   |-- reports\
   |-- results\
   \-- scripts\
```
